ERRATA

Vol. 1 No. 3 p. 4
Tube layout diagram shown for 5885 should be used for 12AT6 and vice versa.

Vol. 2 No. 6 p. 3
The circuit diagram shown shows the B plus voltage to ground. One switch action has been omitted in the GL-877 plate circuit. The omitted section is S-11 and it is connected on the same switch as R-10. Both leads from the right-hand side of M3 should be eliminated. The pole of S-11 connects to the right-hand side of M6, and each of the five switch positions is wired to the bottom end of the corresponding tank coil.

Vol. 3 No. 3
In the circuit diagrams on pages 4 and 5, omit the 0.06 mf condenser which connects between the center of the grid coil and ground.

Vol. 3 No. 3
Fig. 4, page 3, is in error. The lead going from the top of R2 to C should be removed from C and wired instead to the bottom of the secondary of T2. The lead coming from the bottom of R4 to the top of R5 should be replaced with a direct connection. The lead going from R7 to the bottom of R5 should be rewired so that it connects R7 to the top of R5.

Vol. 3 No. 6
(1) Switch 8, in Fig. 2, need only be a three-pole, two-position switch. To change circuit connect the arm of R5 to position 2 on section F. Connect the arm of R6 to position 3 of section F. Connect the arm of R7 to position 1 of section F. (2) Be sure that jacks are wired so that R2 is always connected to the grid of IC. (3) Be sure that the voltage of 600V is connected to the grid of IC. (4) The line states to connect wire from 600V to 50,000 ohm condenser. This should read “50,000 ohm resistor.”

Vol. 5 No. 2
Under Circuit Constants, on page 5, “R6, R7, R8, R9” should read “R6, R7, R8, Rs.”

Vol. 5 No. 6
Under Circuit Constants, on page 6, the second line should read “C3, C4” not “C3, C4.”
