EXPERIMENTERS • AMATEURS

GENERAL ELECTRIC

TYPE 2N107
PNP TRANSISTOR FOR
EXPERIMENTAL AND AMATEUR USE

The 2N107 PNP transistor is a carefully manufactured, hermetically sealed device which will give optimum service when operated within the specified ratings.

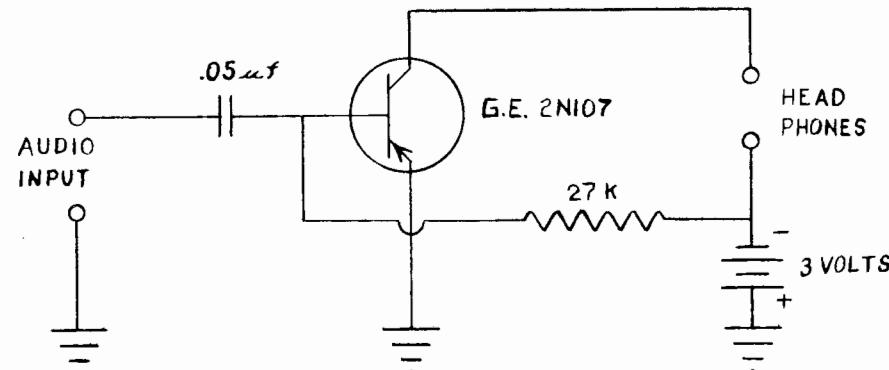

Care must be taken in order to avoid overheating the device while soldering the leads. It is recommended that pliers be used to grip the lead close to the base while soldering the transistor into the circuit.

The 2N107 transistor will operate satisfactorily at any voltage between $1\frac{1}{2}$ volts and 10 volts but a $1\frac{1}{2}$ to 6 volt supply should be used when possible.

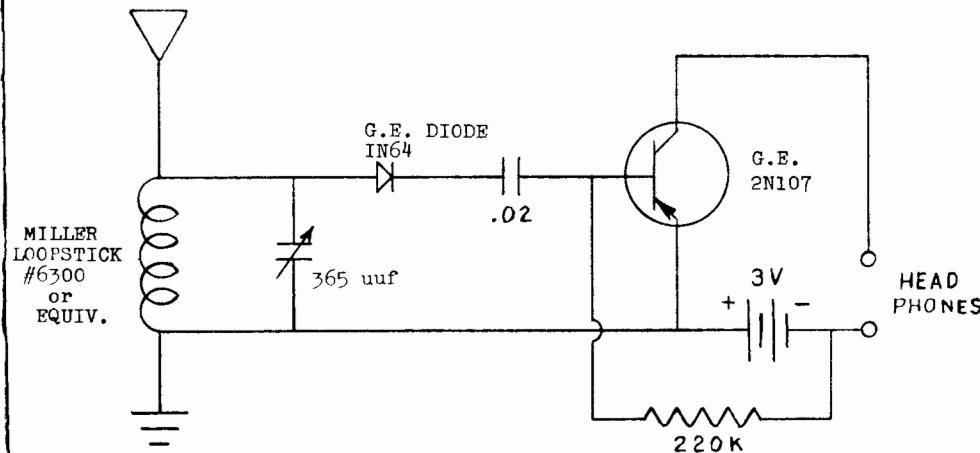

The values of capacitance and resistance listed on the accompanying circuits are approximate, and experimentation is recommended for optimum operation of the circuits.

NOT RECOMMENDED FOR COMMERCIAL USE

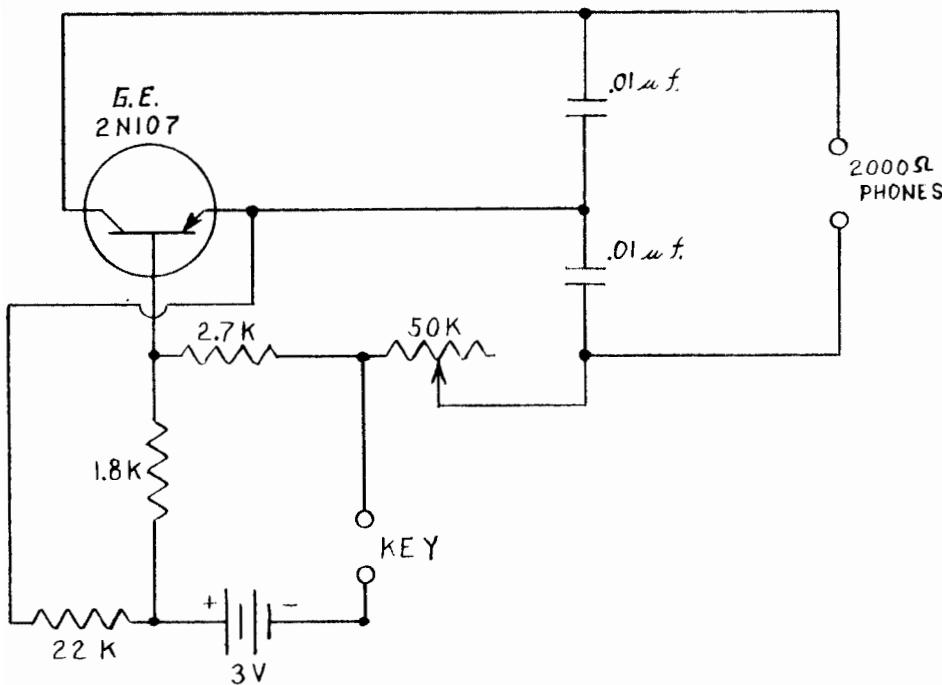

SIMPLE AUDIO AMPLIFIER

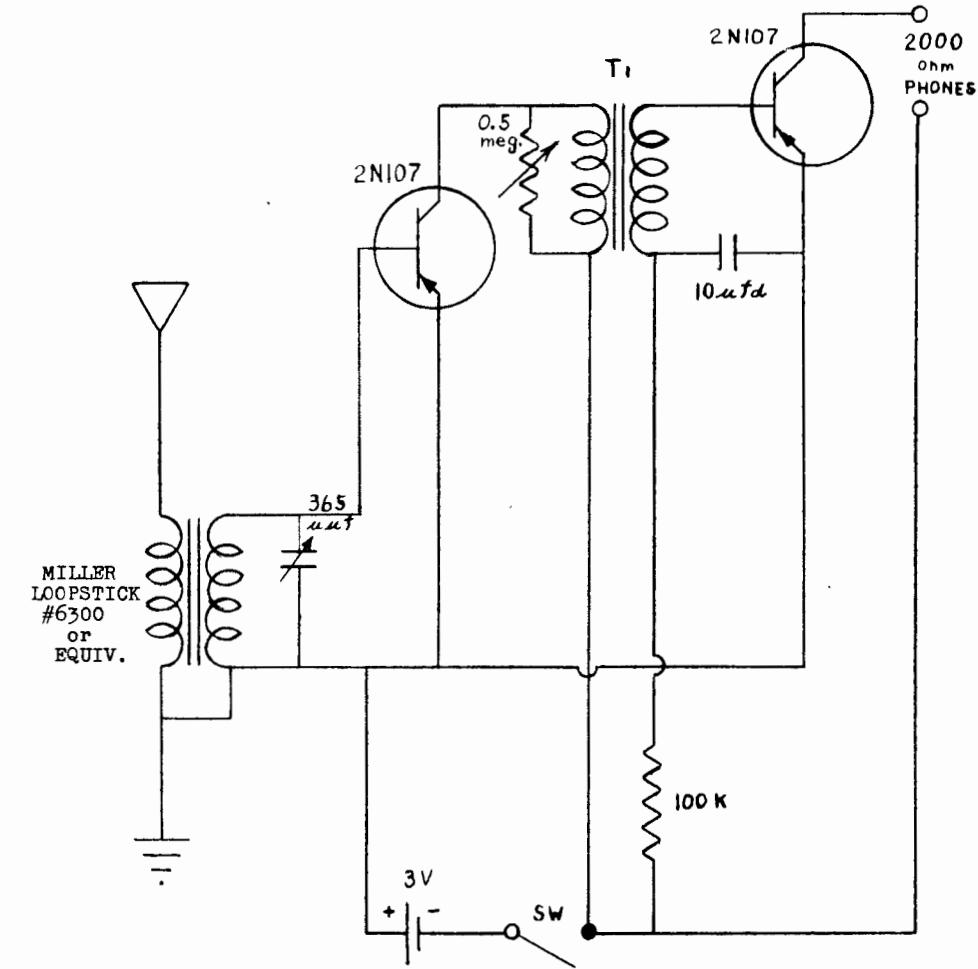

SIMPLE RADIO RECEIVER

CODE PRACTICE OSCILLATOR

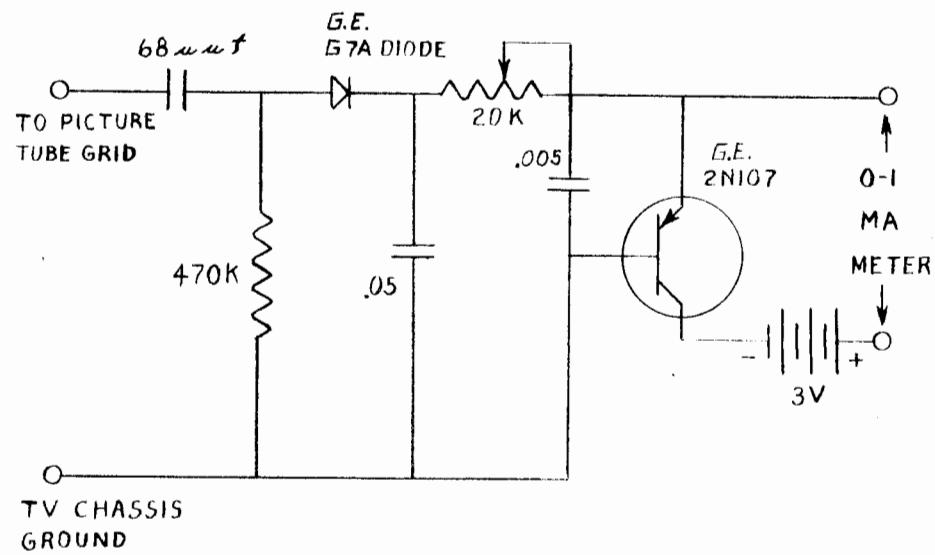

TWO-TRANSISTOR RADIO RECEIVER

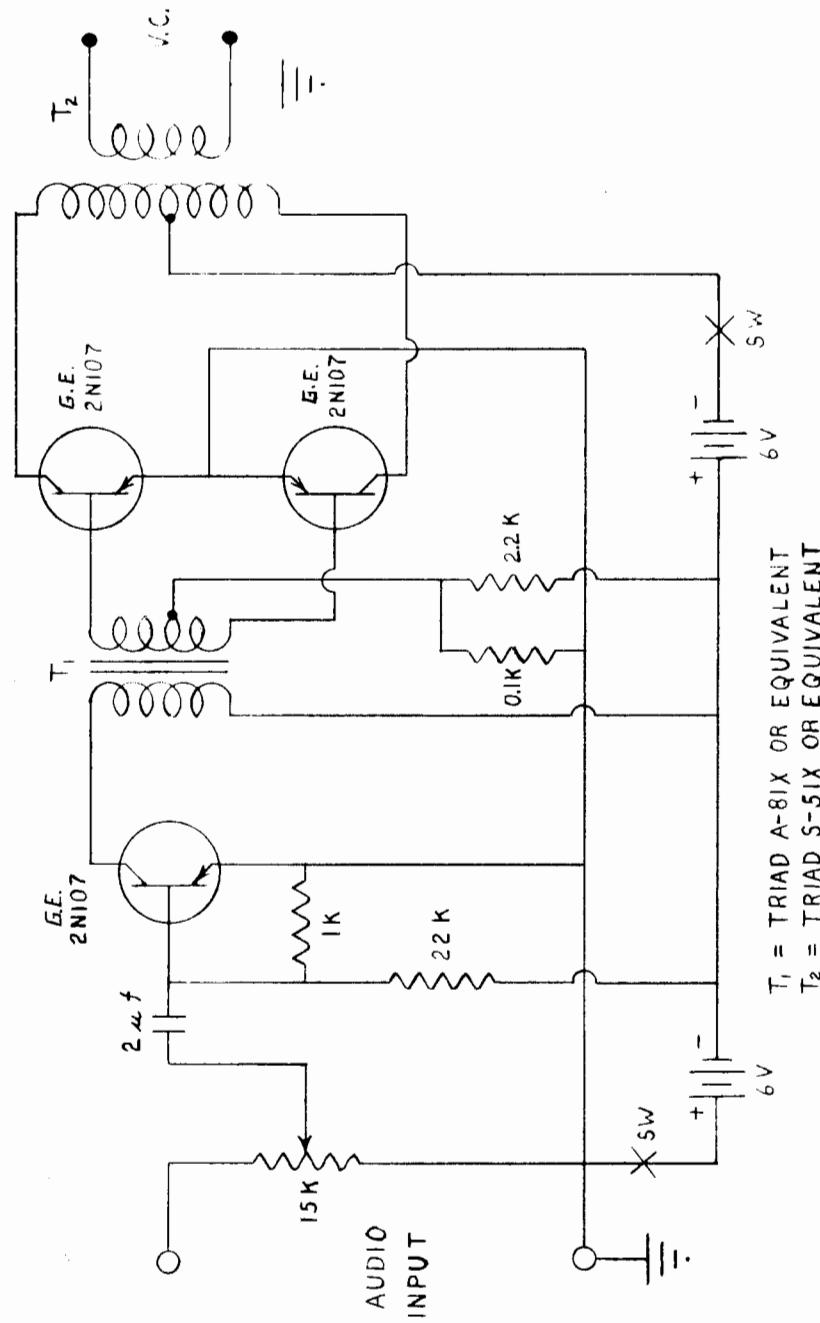

T₁ - PRIMARY 200K
SECONDARY 1K
STANCOR UM-112 OR EQUIVALENT

TV ANTENNA ORIENTATION METER

ROTATE ANTENNA FOR MAXIMUM DEFLECTION ON METER.

LOUD SPEAKER AUDIO AMPLIFIER

T_1 = TRIAD A-8IX OR EQUIVALENT
 T_2 = TRIAD S-5IX OR EQUIVALENT
